

Measuring for your Curtains

- Fix your pole or track first.
- Measure the pole length excluding the finials (end caps).
- Measure the length from the eye of the curtain ring or slider to where you'd like the bottom of the curtain to be - windowsill, floor or puddle length (**Hook Drop**).
- Measure the distance from the curtain ring eye up to where the top of the curtain will be (**Hook to Top**).

Be aware that if you choose a high hook to top measurement covering the pole when closed, then this can cause the curtains to push forward slightly when open.

A. Pole Length

B. Curtain ring to sill

C. Curtain ring to floor

D. Hook to top

E. Clearance on left side of window

F. Clearance on right side of window

Finished Length
